DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 - 8, drawn to an apparatus of stator, classified in class 310, subclass 257.
 - II. Claims 9 - 16, drawn to an apparatus of an electric motor, classified in class 310, subclass 254.
 - III. Claims 17 - 30, drawn to a method of making an electric motor, classified in class 29, subclass 596.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the electric motor group II does not a single electric phase for generating magnetic field. The subcombination has separate utility such as providing the stator in a generator, alternator.
3. Inventions III and I, II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the

instant case the process as claimed can be used to make other and materially different product such as a rotor core of a motor, a generator, and the product as claimed can be made by another and materially different process such as the stator can forming by laminating magnetic stator core.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group I, II is not required for Group III, restriction for examination purposes as indicated is proper.

6. A telephone call was made to attorney Peter Sommer on 2/7/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
